Why Impact?

- ? What value do digital tools and infrastructure components provide for the scientific community?
- ? How they are impacting research practices in the Humanities and beyond?

Understanding impact and the areas in which we can have impact will

- increase visibility and transparency,
- Enable us to communicate benefits to potential researchers, funding agencies & other stakeholders
- strengthen the influence of digital research in the Humanities.

The Impactmatrix

- gathers potential impact factors and success criteria from various sources
- Defined 21 impact areas, and
 - (a) corresponding success factors which **influence** change in these areas
 - (b) criteria which **measure** changes in the selected impact area.
- It is an interactive website hosted on Github: <https://dariah-de.github.io/Impactmatrix/>

We need you!

- Contribute your perspective to how we are measuring impact and success
- Become a member of a working group
- Send us use cases (projects, tools), so we can test the Impactomtarix
